

RENEWABLE ENERGY IN SHROPSHIRE

How much is there?
Where is it?
How could it impact the local economy?

Zero Carbon Shropshire has carried out a study to help us explore these questions – generously funded by Shropshire Council.

We have looked at the physical possibilities of solar and wind power in Shropshire and produced a series of on-line maps showing the siting possibilities and the major physical and geographic constraints. This will help us all move towards our target of Zero-Carbon Shropshire.

If you have an interest in renewable energy generation, land management, community energy development or are just simply interested, we will be presenting the report and maps in a two-hour Zoom session on Wed, 20th October at 2pm. You will hear from representatives of ZCS, SC, the report's authors about the project, but we also want to hear from you!
